RV-10 Carpet Install

Thank you for purchasing this RV-10 Carpet Kit from Aerosport Products. We developed this kit to provide a high-quality flooring option to fellow RV-10 builders. Each piece of carpet is backed with a black Velcro loop material. This provides a soft backing for the carpet as well as a method of attachment for keeping the floor mats and side pieces in place. You will need to get adhesive-backed hook Velcro to complete the installation. With this set up you will be able to remove any section of carpet at any time necessary. The Velcro hook material that is provided is a 2-inch strip, however, you may find that a 1-inch strip will suffice just fine in most areas. Be sure to thoroughly clean the areas on the interior where you will be placing your adhesive-backed strips. This clean surface will provide a better bond for the adhesive. If you have any questions during your installation, please contact us at 614-834-5227 or Info@AerosportProducts.com.
